Summary

Highly motivated and enthusiastic final year B.Tech (CSE - Data Science Specialization) student with hands-on experience in machine learning, generative models, and software development. Passionate about solving real-world problems using cutting-edge AI technologies. Looking for opportunities in data science, machine learning, and AI-driven innovations with a strong mix of research, training, and project-building experience.

Education

B.Tech in Computer Science (Data Science specialization) ITER SOA Bhubaneswar 2022-2026
CGPA: 8.37

Internships and Training

Research Intern — HITLAB (DELPHI Program) July 2025 — Present

- Conducted extensive research on digital health technologies with emphasis on scalability and innovation; authored **40+** research/market analysis reports to date.
- Produced an average of **15–18** deliverables per day (briefs, landscape scans, evidence summaries) while collaborating with multi-disciplinary teams.

Engineer Trainee — BSNL Feb 2025 — Mar 2025

- Gained in-depth exposure to GSM architecture, optical fiber communication, telephone exchanges, and broadband systems.
- Contributed to infrastructure maintenance and automation planning for telecommunication switching networks; studied NGN, SDH, and FTTH systems.
- Collaborated on scalability, reliability, and security challenges in telecommunication services.

Software Developer Fellow — Headstarter Jul 2024 — Sep 2024

- Designed and developed five AI / ML solutions aligned with industry standards in a cross-functional team; completed **5** end-to-end projects using agile practices.
- Delivered production-minded software with emphasis on model integration, teamwork, and iterative delivery within fixed sprint timelines.

Projects

Architectural Image Generation with DCGAN (May 2024- June 2024): Generate real-life architecture; 25% faster cycles with improved samples. Dataset comprising 50,000+ building images.

AI-Powered Maintenance Bill Optimization (July 2024): XGBoost model with accuracy 92%; automated reporting; Accurate cost prediction.Optimize resource allocation by 30%.

ISRO Lunar Crater Image Enhancement (June 2024 - September 2024): GAN-based 4× super-resolution for lunar imagery analysis. Successful processing of 500+ images.

Skills

Programming Languages: Python, C++/C, C#

Machine Learning AI: GANs (CGAN, DCGAN, SRGAN, ESRGAN), XGBoost, RNN, CNN, Supervised Unsupervised Learning, Classification, Regression

Data Science Tools: NumPy, Pandas, Scikit-learn, TensorFlow, Feature Engineering, SQL, Apache Spark, Big Data

Web Development: HTML, CSS, JavaScript, REST APIs, Firebase

Soft Skills: Agile Methodologies, Problem Solving, Team Collaboration

Certifications

Data Science BootCamp — GeeksforGeeks

IBM Data Science Professional Certificate — IBM

Machine Learning Specialization — Stanford Online

Introduction to Generative AI — Google Cloud

Software Engineer Intern Certificate — HackerRank

Achievements

Amazon ML Summer School Aug 2025
Selected through a nationwide test as 1 of ~3,000 learners (India-wide) for a 100% virtual program led by Amazon Data scientists.

CodeFury 8.0 (IEEE UVCE) Aug 2025
Ranked **Top 25** nationwide (out of 200+ teams), demonstrating rapid prototyping and team execution under a 24-hour deadline.

SIH Internal Hackathon Sep 2024
Top **10** finalist out of **95** competing teams; tackled generative AI and computer vision problem statements with a working prototype and presentation.
